Yields have been adjusted to 13.5% moisture. Each variety was evaluated in a large strip-plot at each location, thus each county test was considered as one replication of the test in calculating the average yield. Statistical analysis conducted at 95% confidence interval. Varieties with the same MS letter are not significantly different. Official test weight of No. 2 wheat=58 lbs/bu. TWT = Avg. Test Wt. lbs./bu @ 6 locations. % ≥ Avg. is the % of locations that variety is at or above the field average. \* indicates consecutive years in 'A' group

Programs in agriculture and natural resources, 4-H youth development, family and consumer sciences, and resource development  
University of Tennessee Institute of Agriculture, U.S. Department of Agriculture and county governments cooperating.  
UT Extension provides equal opportunities in programs and employment.
