Data Provided by Ryan Blair, Ext. Area Specialist, Grain and Cotton Variety Testing, and Extension agents in counties shown above. † Hybrids that have any MS letter in common are not significantly different in yield at the 5% level of probability.

* Asterisks after a hybrid name indicate the number of preceding consecutive years in the top-performing "A" group.

Asteriass are a right in anie indicate the frame of preceding consecutive years in the top-perioriting. A group.

All yields are adjusted to 15.5% moisture.

Highlighted cells indicate hybrids that were above average and bold/underline values indicate the top yield, within a location.

^{&#}x27; indicates missing plot calculated by using averages across plots and location. (missin plot / hybrid average across all plots) x location average
