Table A-20. Mean yield and agronomic traits of 15 medium-season (114-116 DAP) corn hybrids evaluated in small plot replicated trials without irrigation at the AgResearch and Education Center at Milan in Milan, Tennessee during 2023. Analysis included hybrid performance over a 1 yr (2023), 2 yr (2022-2023), and 3 yr (2021-2023) period.

| Hybrid ${ }^{\dagger}$ | Herbicide Pkg ${ }^{\ddagger}$ | Insect <br> Pkg. ${ }^{\ddagger}$ | Avg. Yield ${ }^{\S}$ (bu/ac) |  |  | Moisture at Harvest(\%) |  |  | Lodging ${ }^{11}$ (\%) |  |  |

$\dagger$ Hybrids that have any MS letter in common are not significantly different at the $5 \%$ level of probability.

* Asterisks after a hybrid name indicate the number of preceding consecutive years in the top-performing "A" group.
$\ddagger$ For a full description of abbreviated biotech traits, see table 18.
§ All yields are adjusted to $15.5 \%$ moisture.
TI Lodging values do not typically follow a normal distribution, therefore statistical tests to compute LSD were not performed and only mean values are reported.
Values highlighted in light orange are above average for a given trait, MS letters highlighted in dark orange are in the "A group", indicating no statistical difference from the top-performing variety, for a given trait.
