[†] Hybrids that have any MS letter in common are not significantly different at the 5% level of probability.

^{*} Asterisks after a hybrid name indicate the number of preceding consecutive years in the top-performing "A" group.

[‡] For a full description of abbreviated biotech traits, see table 18.

[§] All yields are adjusted to 15.5% moisture.

[¶] Protein, Oil, and Starch on a dry weight basis.

^{||} Values highlighted in orange are above average, values highted in dark orange are in the upper 25%. MS letters highlighted in dark orange are in the "A group", indicating no statistical difference from the top-performing variety, for a given trait.

Springfield irrigated and Spring Hill locations were dropped from across locations analysis due to high trial variation.
