L.S.D. ^{.05}		10	0.9	2	5	-
C.V.		10	6	1	8	-

[†] Varieties that have any MS letter in common are not significantly different at the 5% level of probability.

- Values highlighted in orange are above average, values highted in dark orange are in the upper 25%. MS letters highlighted in dark orange are in the "A group", indicating no statistical difference from the top-performing variety, for a given trait.

[‡] C.V. is only reported for variables evaluated on a ratio scale.

[§] L.S.D. values are given for ANOVA that were significant at P<0.05. Variables in which minimal variation was observed were not subjected to ANOVA and are reported as N.S.

^{††} For a full description of abbreviated biotech traits, see table 23.

* Asterisks after a name indicate the number of preceding consecutive years in the top-performing "A" group.

[§] All yields are adjusted to 13% moisture.

^{††} Lodging was evaluated on a scale of 1 (no lodging) to 5 (complete lodging).
