‡ Data Provided by Ryan Blair, Ext. Specialist, Grain and Cotton Variety Testing, and Extension agents in counties shown above.

† Hybrids that have any MS letter in common are not significantly different in yield at the 5% level of probability.

* Asterisks after a hybrid name indicate the number of preceding consecutive years in the top-performing "A" group.

§ All yields are adjusted to 15.5% moisture.

Highlighted cells indicate hybrids that were above average and bold/underline values indicate the top yield, within a location.

County locations include: Ames (Fayette), Chester, Crockett, Gibson, Giles, Hardeman, Haywood, Henry (2 locs), Jefferson, Loudon, Madison (2), Marshall, Meigs, Montgomery, Obion, Trousdale, Weakley.
